[linkedin.com/in/Mantasha Ansari](https://linkedin.com/in/MantashaAnsari)

DevOps Engineer with 2+ years of experience in AWS, Kubernetes, and Terraform. Skilled in building and automating high-availability deployment pipelines, optimizing release processes, and applying security best practices. Experienced in managing scalable cloud-native applications with a focus on reliability and performance.

EDUCATION

Master of Computer Application (MCA), *Mumbai University* Pursuing
Bachelor of Information Technology (Bsc-IT) *Bunts Sangha College, Kurla* 2023

SKILLS

Cloud & IaC:	AWS (EKS, Azure, Terraform, Ansible)
Containers & Git:	Docker, Kubernetes, Helm, Git, EKS, AKS, ECS
CI/CD & Automation:	Jenkins, GitHub Actions, AWS CICD, Azure Devops, Shell Scripting
Monitoring & OS:	Azure Monitors, Prometheus, Grafana, CloudWatch, Linux (RHEL, Ubuntu)
Security :	SonarQube and Trivy

TECHNICAL EXPERIENCE

Associate DevOps Engineer - Training Infrastructure Platform Dec 2025 — Present

IT VEDANT, Thane, India

- Architecture and managed multi-tier lab environments on AWS using Terraform and Ansible for automated provisioning.
- Deployed and orchestrated containerized microservices on Amazon EKS and ECS, ensuring seamless scalability.
- Standardized CI/CD workflows using Jenkins and GitHub. Guided 50+ engineers on cloud architecture and devops principles, including secure design and fault tolerance.

Technical Cloud Engineer / Training March 2025 — Nov 2025

Jet-king, Thane, India

- Configured and optimized Azure and AWS infrastructure including networking, IAM, and compute resources.
- Designed secure virtual network architectures (VNet, subnets, SGs) for multi-tier applications. Implemented identity and access management using RBAC. Reduced system downtime through proactive monitoring and troubleshooting.

Cloud & DevOps Engineer / Trainer Jan 2024 — March 2025

Nettech India, Mumbai, India

- Automated Linux server deployments and networking for cloud-native applications.
- Supported migration of legacy applications to cloud environments ensuring scalability and security. Implemented monitoring and logging solutions using cloud-native and open-source tools.

PROJECTS

Scalable & Secure Streaming Platform on AWS EKS [link](#)

- Integrated SonarQube for static code analysis and Trivy for vulnerability scanning, blocking insecure builds before production.
- Implemented CI/CD-driven deployment using Helm, enabling automated and version-controlled Kubernetes rollouts. Reduced security risks by 65% and improved deployment reliability through automated security gates in CI/CD.

DevOps AI Mate | CI/CD on AWS ECS [link](#)

- Developed and containerized a Python-based AI assistant, managing the full lifecycle from Dockerization to deployment on Amazon ECS with Fargate for serverless scaling.
- Designed a robust CI/CD pipeline using Jenkins and AWS ECR, automating the transition from code commit to production deployment.
- Achieved 99.9% application availability and a 70% improvement in deployment velocity by implementing ECS auto-scaling policies and CloudWatch alarms.

Blue-Green Deployment | Zero Downtime Strategy [link](#)

- Implemented a high-availability release strategy using AWS CodePipeline, CodeDeploy, and Application Load Balancers (ALB) to manage traffic shifting between "Blue" and "Green" environments. Automated build, test, and deployment workflows reducing manual effort by 80% and doubling release frequency.
- Reduced deployment rollback time by 40–50% by optimizing release and recovery processes, enabling faster failure resolution.

CERTIFICATES

AWS Certified Solutions Architect – Associate [Link](#)

AWS Cloud Practitioner [Link](#)

Linux Essentials [Link](#)

Python Basics [Link](#)
